## Abstracts

The global Low K Paste PVC market size is expected to reach \$ 2162 million by 2032, rising at a market growth of 2.1% CAGR during the forecast period (2026-2032).

Global sales of Low K Paste PVC was about 1720 k tons in 2025 with average price of 1080 USD/ton. China is one of the largest producers of Low K Paste PVC globally.

Low K Paste PVC refers to a paste-grade (dispersion/emulsion) PVC resin designed for plastisol processing, with a low K-value (K-number)  $\leq 70$ , meaning it has a lower average molecular weight / degree of polymerization than standard paste PVC grades. In practice, low-K paste PVC is selected when a formulation needs lower plastisol viscosity, faster gelation/fusion, and improved processability for coating, dipping, spreading, or foaming, while typically trading off some mechanical strength compared with higher-K grades.

This report studies the global Low K Paste PVC production, demand, key manufacturers, and key regions.
