According to our (Global Info Research) latest study, the global Low Molecular Citrus Pectin(LCP) market size was valued at US\$ 60.89 million in 2025 and is forecast to a readjusted size of US\$ 90.83 million by 2032 with a CAGR of 5.9% during review period.

Low Molecular Citrus Pectin (LCP) is a natural polysaccharide extracted from citrus fruits. It has a small molecular structure and is therefore widely used in biology, health products, and functional foods. With advancements in scientific research, increasing attention is being paid to the role and unique functional properties of low molecular weight citrus pectin in the health field. Citrus pectin is primarily derived from the peel and pulp of citrus fruits, especially pectin-rich fruits such as oranges and lemons. Through modern extraction and degradation processes, scientists have been able to effectively reduce the molecular weight of citrus pectin, obtaining low molecular weight citrus pectin (LCP), which significantly improves its solubility and bioavailability. In 2025, the global production of Low Molecular Weight Citrus Pectin (LCP) was approximately 337.227 tons, with a unit price of approximately US\$175.49/kg and a gross profit margin of approximately 45.59%. Downstream customers include Econugenics, Nutricology, Source Naturals, Now Food, AOR, Wonder Laboratories, Vital Nutrient, Designs for Health, and Douglas Laboratories.

Low molecular weight citrus pectin possesses unique characteristics due to its small molecular structure. It dissolves more easily than traditional high molecular weight pectin, is rapidly absorbed by the body, and has higher bioavailability, thus better exerting its health benefits. Low molecular weight citrus pectin exhibits good adhesion in the intestines, forming a protective film, promoting intestinal health, and also has certain

lipid-lowering and blood sugar-regulating effects. These properties make it an important ingredient in many functional foods and health products.

In food processing, low molecular weight citrus pectin is widely used in the production of jellies, jams, candies, and other products, giving them a good taste and stability. Compared to traditional pectin, low molecular weight citrus pectin achieves the same effect at lower concentrations, thereby reducing the amount added and improving production efficiency. Its natural source and health properties make it a popular food additive among consumers, especially suitable for low-sugar and low-fat foods.

Furthermore, low-molecular-weight citrus pectin has shown unique benefits in the health and wellness field. Studies have shown that it has a gut-regulating effect, promoting peristalsis and relieving constipation, and possesses antioxidant properties, helping to reduce free radical damage and delay aging. Therefore, it has significant potential in improving gut health, enhancing immunity, and anti-aging. With increasing consumer demand for natural health ingredients, low-molecular-weight citrus pectin is gradually becoming a popular ingredient in the market.

In the future, as the demand for natural health products continues to grow, low-molecular-weight citrus pectin will maintain an important position in the food and health supplement industries. Technological advancements will further expand its extraction processes and application areas, allowing its functional characteristics to play a greater role in personalized nutritional products and functional
