Abstracts

According to our (Global Info Research) latest study, the global Low Molecular Weight Di-Hydroxy PPO market size was valued at US\$ 426 million in 2025 and is forecast to a readjusted size of US\$ 1299 million by 2032 with a CAGR of 13.6% during review period.

Low Molecular Weight Di-Hydroxy PPO is an electronic-grade polyphenylene oxide (PPO) material with a strictly controlled molecular weight and retaining hydroxyl functional end groups at both ends, resulting in excellent low dielectric constant, low dielectric loss, and high purity. This material is commonly used in high-frequency electronic applications such as high-speed PCBs, HDI boards, AI server boards, and power electronic modules. It can be compounded with other resins or curing agents through the end hydroxyl groups to form thermosetting materials, ensuring dimensional stability and signal transmission performance during processing. In 2025, global shipments of Low Molecular Weight Di-Hydroxy PPO were approximately 3,625 tons, with a unit price of approximately US\$114,200 per ton and a gross profit margin of approximately 58%-70%.

Supply and Demand Status: Global Low Molecular Weight Di-Hydroxy PPO production capacity is highly concentrated, with a few international leaders such as SABIC long monopolizing the high-end market. Supply is significantly less than demand, resulting in a structural shortage in the market. Domestic companies such as Shengquan Group and Dongcai Technology are rapidly deploying thousand-ton-level production lines, but overall supply remains tight.

Future Demand Explosion: With the rapid growth of AI servers, high-frequency PCBs,

5G/6G communication equipment, and new energy vehicle electronic modules, the market demand for low-dielectric modified polyphenylene ether is expected to increase significantly between 2025 and 2032.

Market Structure: SABIC maintains its technological and brand leadership, holding the highest global market share. Domestic companies, through the construction of thousand-ton-level production lines and joint development with downstream customers, are expected to occupy approximately 65-70% of global Low Molecular Weight Di-Hydroxy PPO production capacity in the short term, demonstrating a clear trend towards domestic production. The overall industry presents a pattern of 'high prices, low volume, supply falling short of demand, and rapid domestic catching up.'

Price and Gross Profit: Low Molecular Weight Di-Hydroxy PPO has a selling price of approximately RMB 700,000–1,200,000 per ton, with a gross profit margin as high as 58%–70%, exhibiting typical characteristics of high-end specialty plastics.
