Abstracts

The global Low and Ultra-low Viscosity HDI-based Polyisocyanate market size is expected to reach \$ 110 million by 2029, rising at a market growth of 3.2% CAGR during the forecast period (2023-2029).

Polyisocyanate based on the widely used aliphatic hexamethylene-1,6-diisocyanate (HDI). These are primarily used for high performance coatings applications to improve weatherability and UV/chemical resistance. These low and ultra low viscosity grades have 100% symmetrical chemical structure enabling better performance compared to competitors which have slight biuret contamination. The higher quality is great for non-solvent formulations and enables better surface smoothness and gloss retention.

This report studies the global Low and Ultra-low Viscosity HDI-based Polyisocyanate production, demand, key manufacturers, and key regions.
