Low nitrogen vacuum hot water unit is an efficient and environmentally friendly hot water supply equipment. It uses advanced combustion technology and vacuum heat exchange principles. The high-temperature flue gas generated by combustion exchanges heat with water in a vacuum state, thereby heating and producing hot water. The equipment has the advantages of low nitrogen emissions, high efficiency and energy saving, safety and reliability, and can significantly reduce energy consumption and environmental pollution. At the same time, the low-nitrogen vacuum hot water unit also has an intelligent control system, which can automatically adjust the heating power and hot water temperature according to actual needs, achieving on-demand supply and precise control. This kind of equipment is widely used in hotels, guesthouses, schools, hospitals and other places that require large amounts of hot water. It is one of the energy-saving and environmentally friendly hot water supply solutions.
