Abstracts

According to our (Global Info Research) latest study, the global Low-Noise Air Circulating Fan market size was valued at US\$ 1559 million in 2025 and is forecast to a readjusted size of US\$ 2329 million by 2032 with a CAGR of 5.9% during review period.

In 2025, global production of low-noise air circulating fans reached 17.82 million units, with an average selling price of US\$85 per unit. Low-noise air circulators are fans whose core function is to 'mix and circulate air throughout the room,' and which keep operating noise levels low, especially at low speeds and nighttime modes. This is achieved through low-noise aerodynamic design (optimized blade airfoils and airflow guides/ducts to reduce turbulence and blade tip noise), low-vibration motors and drives (DC brushless motors, smooth speed control, and PWM noise suppression), and structural and NVH treatments (dynamic balancing, vibration damping pads/isolation structures, and resonance control) to reduce sound pressure levels while maintaining sufficient airflow distance and circulation efficiency. This makes them more suitable for noise-sensitive environments such as bedrooms, children's/elderly rooms, and offices. The goal of low-noise air circulator design is to ensure that the noise generated during operation at commonly used fan speeds (usually low to medium) does not interfere with conversation, thinking, or sleep. The upstream of the industry chain mainly includes motors and drives (AC to DC brushless/BLDC), impellers and air ducts/volutes and air guides (determining air distance and static pressure), control boards and sensors (temperature and humidity/timer/remote control/partial intelligent linkage), structural components and molds (injection molded parts, metal parts), etc.; the midstream involves manufacturers providing aerodynamic design and NVH (noise, vibration), reliability/safety certification, and integration of appearance and interaction (touch/remote control/APP); the downstream enters homes, offices and light commercial

scenarios through e-commerce and offline home appliance channels, as well as cross-border channels, and is often sold in conjunction with air conditioners and fresh air/dehumidifiers. Gross profit margins range from approximately 15% to 25%.
