According to our (Global Info Research) latest study, the global Low Oil Level Alarm market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A low oil level alarm is a device used to monitor and alarm for low oil levels in a machine or equipment tank. It is usually installed in the oil tank or oil tank of the engine, hydraulic system, gearbox and other equipment to monitor the oil level. The working principle of the low oil level alarm is usually to monitor the oil level in the oil tank through a float, sensor or other detection device. When the oil drops to a predetermined low oil level, the alarm will send out an alarm or signal to remind the operator. The oil needs to be replenished in time to avoid equipment damage or failure caused by low oil. Low oil level alarms are widely used in various mechanical equipment such as industrial equipment, generator sets, ships, and automobiles. It can effectively protect the equipment from damage caused by insufficient oil and improve the reliability and safety of the equipment.
