According to our (Global Info Research) latest study, the global Low Phase Noise Oscillators market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Low Phase Noise Oscillators (LPNOs) are oscillators that generate a signal with a very low level of phase noise. Phase noise is a measure of the frequency stability of an oscillator and is characterized by spurious signals around the main signal frequency. LPNOs are used in applications where high-frequency stability and low noise are required, such as in radar systems, electronic warfare, communication systems, and high-speed data converters.
