Abstracts

The global Low Power Radio Frequency Scanner market size is expected to reach \$ 21300 million by 2029, rising at a market growth of 7.8% CAGR during the forecast period (2023-2029).

The global low-power RF scanner market is expected to witness significant growth over the forecast period owing to strong government push for IoT-based solutions across industries. Additionally, rising demand for RFID solutions in the banking and healthcare sectors is primarily driving the low-power RF scanner market outlook. Additionally, the growing demand for RFID products in the retail industry is expected to shape the future of the low-power RF scanner market. Additionally, the surge in the adoption of RFID tags in Industry 4.0, IoT, and smart manufacturing is expected to provide lucrative opportunities for expansion of the low-power RF scanner market during the forecast period.

The low power radio frequency scanner is a network-connected device that can be portable or permanently attached. It uses low power radio waves to transmit signals that activate the tag. Once activated, the tag sends a wave back to the antenna, where it is translated into data. The transponder is in the RFID tag itself.
