Low pressure diaphragm seals are specialized devices used in pressure measurement applications where the pressure to be measured is relatively low.

Low pressure diaphragm seals are designed to accurately measure pressures that are typically below 100 psi (pounds per square inch), though the exact range can vary based on the specific seal and application. They often use thin, flexible diaphragms made from materials such as stainless steel, elastomers, or other suitable alloys. The choice of material depends on factors like the pressure range, temperature, and compatibility with the process media.
