Abstracts

The global Low Pressure Molding Hot Melt Adhesive market size is expected to reach \$ 391 million by 2029, rising at a market growth of 6.7% CAGR during the forecast period (2023-2029).

The global key manufacturers of low pressure molding hot melt adhesives are Henkel, Bostik and Huntsman. The top two manufacturers have a market share of about 70%. Global origins are mainly in North America, Europe and China, with Europe being the largest production region, holding more than 40% of the market share. By far, polyamide is the largest product segment, with a market share of around 90%. Meanwhile, in terms of applications, consumer electronics is the largest application, with about 65% of the market share.

The low-pressure injection molding process is a packaging process that uses very low injection pressure to inject hot-melt adhesive material into the mold and quickly solidifies it (the speed only takes 1-50 seconds). It uses hot-melt adhesive as the material and has excellent sealing properties. And excellent physical properties, product performance achieves insulation, temperature resistance, impact resistance, shock absorption, moisture-proof, waterproof, dust-proof, chemical corrosion resistance and other functions.

This process is currently mainly used in the packaging and protection of precision and sensitive electronic components, including: printed circuit boards (PCBs), automotive electronics, mobile phone batteries, wiring harnesses, waterproof connectors, sensors, micro switches, inductors, and antennas etc.

Low-pressure injection molding plays a good role in protecting electronic components.

The traditional injection molding process has defects due to excessive pressure. Because low-pressure molding requires only a small pressure to make the melt flow into a small mold space, it will not damage the fragile components that need to be packaged, greatly reducing the cost. The low-pressure injection molding process is not only environmentally friendly, but also greatly improves production efficiency and can help reduce the total production cost.

Low pressure injection molding hot melt adhesive. This material is able to reach small areas without high pressure, making it ideal for sensitive components. The adhesive properties of polyamide provide optimal bonding and effectively seal against moisture and other environmental contaminants. The high chemical resistance of low-pressure molding hot melt adhesives represented by polyamide to oil, diesel, grease and weak acids also improves the performance of the finished product.
