According to our (Global Info Research) latest study, the global Low Pressure Pressure Transmitter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A low pressure pressure transmitter is a pressure sensor specially designed to measure and transmit low pressure ranges. Their high sensitivity and accuracy provide reliable pressure measurements in low pressure environments. Low-pressure pressure transmitters are typically suitable for applications requiring measurement of low pressures, such as gas flow monitoring, gas analysis, laboratory research, and medical equipment. They are able to measure small changes in pressure and convert them to a corresponding electrical signal output, usually a current signal (such as 4-20mA) or a voltage signal (such as 0-10V)
