Low profile floor scale is a type of weighing scale that is designed to be installed directly into the floor or pit, so that the weighing platform is level with the surrounding surface. This allows for easy loading and unloading of materials using forklifts, pallet jacks, and other equipment. Low profile floor scales are commonly used in industrial applications where heavy loads need to be weighed, such as shipping and receiving, manufacturing, and warehousing. They are often used in environments where space is limited, as the low profile design reduces the amount of space required for installation and use.
