According to our (Global Info Research) latest study, the global Low-purine Beer market size was valued at US\$ 142 million in 2025 and is forecast to a readjusted size of US\$ 202 million by 2032 with a CAGR of 5.0% during review period.

In 2025, global sales volume for low-purine beer is projected to reach approximately 92 million liters, with an average price of about \$1.50 per liter.

Low-purine beer along with beer-flavored beverages is produced through processes such as raw material control, yeast selection, fermentation regulation, membrane separation, or enzymatic treatment to reduce the purine content in the finished product. It primarily targets consumers concerned with uric acid management, mindful drinking, and 'light-burden' consumption. While it has already achieved a high level of recognition in the Japanese market, it is also currently gaining traction amidst the growing trend toward health-conscious alcoholic beverages in China. The upstream supply chain comprises malt, hops, yeast, enzyme preparations, and filtration/separation equipment; the downstream market primarily serves beer brands, convenience stores, supermarkets, e-commerce channels, the food service sector, and various health-oriented drinking occasions.
