## Abstracts

The global Low Reflection Film market size is expected to reach \$ 1094.7 million by 2029, rising at a market growth of 6.6% CAGR during the forecast period (2023-2029).

With the growing use of electronic displays in various applications such as televisions, smartphones, tablets, laptops, and automotive displays, there is a need to minimize reflection and glare for optimal viewing experiences. Low reflection films help reduce unwanted reflections, enhancing the clarity and visibility of displays in different lighting conditions.

Low Reflection Film is an optical film to be laminated on the front surface of a display in order to minimize reflection of light from outside and of viewing person. In addition, such film effectively protects the display by reinforcing physical properties, durability and anti-soiling.
