Abstracts

The global Low-silver Solder Paste market size is expected to reach \$ 170 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

Low-silver solder paste (often SAC105, SAC0307, or Sn-Cu based) is a cost-effective, lead-free soldering material designed with reduced silver content (typically 0.1% to 1.0% Ag) compared to standard SAC305. It offers lower material costs, reduced copper leaching, and enhanced thermal fatigue/drop resistance for consumer electronics, automotive, and handheld devices.

Market size: In 2025, global low-silver solder paste production reached 5,091 tons, with an average price of USD 22/kg and total production capacity of approximately 7,000 tons.

Gross margin: Industry gross margin is 25%-35%.

Cost structure: Direct materials account for about 70%, manufacturing overhead about 23%, and labor cost about 7%.

Industry chain: Upstream includes metal powders such as tin ingots, silver powder, and copper powder, as well as fluxes and chemical additives; downstream includes SMT assembly, consumer electronics, automotive electronics, communication equipment, and industrial control sectors.
