Low Stress Dot Peen Marking Equipment is an industrial marking device that employs a mechanical impact mechanism to create permanent identifiers on metal, plastic, or composite surfaces, with the defining feature of exerting minimal mechanical stress during the marking process to prevent material deformation, micro-cracks, or structural compromise. The equipment uses a precisely controlled tungsten carbide or diamond stylus to generate high-frequency dot-peen impressions on the workpiece surface, forming alphanumeric characters, serial numbers, or QR codes through dot matrix patterns. It is particularly suited for high-precision components sensitive to stress, such as medical devices, aerospace parts, precision electronics, and critical automotive components. Compared to traditional marking methods, low-stress dot peen marking delivers high-contrast, wear-resistant markings while significantly reducing heat-affected zones and residual stress, ensuring legibility without compromising the workpiece's mechanical properties. Additionally, the equipment often supports automation integration for high-speed production lines and features programmable control systems for rapid switching between complex marking patterns. Due to its reliability, durability, and material-friendly operation, low-stress dot peen marking equipment is a preferred

solution in high-end manufacturing and regulated industries like healthcare and automotive.
