The global Low Temperature Cross-Linked Shrink Film market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Low temperature cross-linked shrink film is a cross-linked film designed to reduce shrinkage temperature and heat-sealing time. Its low shrinkage force can prevent soft products from deforming. Cross-linked shrink film uses the cross-linking of polymers with irradiation to strengthen and sterilize shrink film. The interwoven strands strengthen the polyolefin material's seal strength and tear resistance.
