According to our (Global Info Research) latest study, the global Low Temperature Fixing Toner market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Laser printers use heat and pressure to melt toner and secure it to the paper. Traditional low-temperature toners require heat in excess of 140 degrees Celsius, but low-temperature fixing toner allows fusing at temperatures below 100 degrees Celsius. In addition, by improving the thermal response speed, the amount of toner used can be significantly reduced while maintaining the same density as conventional products.
