Abstracts

The global Low Temperature Fixing Toner market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Laser printers use heat and pressure to melt toner and secure it to the paper. Traditional low-temperature toners require heat in excess of 140 degrees Celsius, but low-temperature fixing toner allows fusing at temperatures below 100 degrees Celsius. In addition, by improving the thermal response speed, the amount of toner used can be significantly reduced while maintaining the same density as conventional products.

This report studies the global Low Temperature Fixing Toner production, demand, key manufacturers, and key regions.
