## Abstracts

The global Low Temperature Laundry Chemicals market size is expected to reach \$ 2691 million by 2032, rising at a market growth of 6.4% CAGR during the forecast period (2026-2032).

In 2024, global low temperature laundry chemicals production reached approximately 482,174 ton, with an average global market price of around USD 3,500 per ton. A factory gross profit of USD1,050 per ton with 30% gross margin. A single line full machine capacity production is around 15,000 ton per line per year. downstream demand is concentrated in household, commercial laundry services and industrial laundry. A large hotel chain switches from standard detergents to cold-optimized laundry chemicals for white linens and guest laundry. Low-temperature laundry chemicals are specialized cleaning agents, featuring enhanced enzymes, specific surfactants, and powerful oxidizers (like peroxide-based systems) that effectively remove stains, brighten fabrics, and sanitize at cooler water temperatures (often below 40°C/104°F), reducing energy consumption, protecting delicate fabrics, and minimizing microplastic shedding compared to traditional hot-water washing. They overcome the slower kinetics of cold water by using tailored molecules designed to work efficiently in mild conditions.

This report studies the global Low Temperature Laundry Chemicals production, demand, key manufacturers, and key regions.
