According to our (Global Info Research) latest study, the global Low-temperature Milk and Low-temperature Yogurt market size was valued at USD 611 million in 2022 and is forecast to a readjusted size of USD 854.5 million by 2029 with a CAGR of 4.9% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Low-temperature milk is not boiled during the sterilization process, so its flavor is close to that of fresh milk. Due to the limitations of cold storage and short shelf life, the popularity of 'fresh milk' is very low. However, with the development of dairy companies and cold chain transportation, 'pasteurized milk' is becoming more and more popular among Chinese consumers. Low-temperature yogurt retains active lactic acid bacteria, increases beneficial intestinal flora, forms an antibacterial biological barrier, and can improve the gastrointestinal function of the human body.
