Abstracts

The global Low Temperature Plasma Sterilizer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The industry trend for Low Temperature Plasma Sterilizers is witnessing rapid growth due to several factors. There is an increasing demand for effective and gentle sterilization methods that can safely disinfect heat-sensitive medical instruments and equipment. Low-temperature plasma sterilizers offer a viable solution by providing high-level sterilization while minimizing the risk of damage to delicate materials. Additionally, stringent regulations and guidelines in healthcare settings call for advanced sterilization technologies to ensure patient safety and prevent healthcare-associated infections. As technology advances and more compact and user-friendly plasma sterilizers become available, the industry trend for these devices is expected to continue its upward trajectory.

Low Temperature Plasma Sterilizer is a medical device used for the sterilization of heat-sensitive equipment and instruments in healthcare settings. This sterilization method utilizes low-temperature plasma generated by an electric field to effectively kill microorganisms and other pathogens on medical instruments. The plasma consists of highly reactive gas species that interact with and destroy the genetic material of bacteria, viruses, and other microbes. Low-temperature plasma sterilizers operate at lower temperatures than traditional sterilization methods like steam or hot air, which helps preserve the integrity of heat-sensitive materials such as plastics, electronics, and optics.
