Abstracts

According to our (Global Info Research) latest study, the global Low-temperature Resistant Structural Sealant market size was valued at US\$ 875 million in 2025 and is forecast to a readjusted size of US\$ 1347 million by 2032 with a CAGR of 6.3% during review period.

In 2025, the global supply of low-temperature structural sealants is estimated at 5.67 million units, with an average price of approximately US\$150 per unit.. Low-temperature structural sealants are high-performance sealing materials that maintain structural bond strength, elastic displacement absorption capacity, and long-term sealing performance in low-temperature environments. Compared to ordinary low-temperature sealants, their core difference lies in their structural load-bearing capacity, allowing them to be used in connection areas that can withstand certain loads, vibrations, or displacements. These products are typically based on silicone, polyurethane, or modified polymers and are widely used in building curtain walls, door and window assembly, cold storage and insulation systems, low-temperature industrial equipment, LNG storage and transportation facilities, rail transportation, and some electronic and electrical equipment. The upstream of the industry chain mainly includes base resins, fillers, crosslinking agents/curing agents, plasticizers, low-temperature toughening agents, coupling agents, catalysts, and packaging materials; the midstream consists of sealant manufacturers responsible for formulation development, mixing and dispersion, filling, and performance verification; and the downstream comprises end-use industries such as construction, energy and chemical engineering, industrial equipment, and transportation.
