Abstracts

Low temperature sterilization is one of the most commonly used technique for disinfection and sterilization of equipment that are incapable to withstand high pressures and temperature in conventional sterilization techniques such as autoclave and hot air sterilization. Thus, this technique is considered to ideal for devices such as fiber optics, flexible scopes, laryngoscopes, polymers on camera, and others. The commonly used low temperature Technology type is carried out with the use of ethylene oxide gas as it is absorbed by many kinds of plastic and other materials that are usually sterilized at low temperatures.
