Abstracts

Low-temperature thermosetting structural adhesive is a one-component, fast-curing modified epoxy adhesive. It is designed specifically for CSP (FBGA) or BGA and is a reworkable underfill. This glue can form a consistent and defect-free underfill layer, effectively reducing the impact caused by the thermal expansion coefficient mismatch between the chip and the substrate or external forces, thereby improving product reliability¹. Low-temperature thermosetting glue usually refers to epoxy resin glue that is heated and cured under lower temperature conditions (such as 60 degrees, 70 degrees, 80 degrees), and is suitable for certain precision electronic components or LED components that are not resistant to high temperatures.

According to our (Global Info Research) latest study, the global Low Temperature Thermosetting Structural Adhesive market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
