Abstracts

According to our (Global Info Research) latest study, the global Low Trauma & Skin Friendly Adhesives market size was valued at US\$ 161 million in 2024 and is forecast to a readjusted size of USD 234 million by 2031 with a CAGR of 5.6% during review period.

Low trauma adhesives are skin-friendly adhesives for bandages, dressings and surgical tapes. The goal is not only to alleviate pain when removing skin adhesives, but also to avoid exacerbating existing wounds and ulcers or creating new ones.

Low-trauma adhesives are specialized medical adhesives designed to minimize skin damage and discomfort during application and removal. They are typically used in wound care products, surgical dressings, and tapes, particularly for sensitive skin, elderly patients, or individuals with compromised skin integrity. These adhesives maintain secure adhesion while reducing the risk of skin irritation, tearing, or inflammation, making them ideal for extended use in medical settings.

Market Drivers: The market for low-trauma adhesives is driven by the growing aging population and the increasing prevalence of chronic wounds and skin conditions. As healthcare providers focus on improving patient comfort and outcomes, there is a higher demand for advanced wound care products that incorporate low-trauma adhesives. Additionally, the shift towards minimally invasive procedures and the rising trend of home healthcare and telemedicine are boosting the demand for these products, as they offer safer and more comfortable solutions for patients.

Challenges: Despite the benefits, the market faces challenges such as high production

costs and limited availability of raw materials. Developing adhesives that balance strong adhesion with low trauma can be technically complex, requiring significant R&D investment. Furthermore, regulatory hurdles and the need to meet stringent safety standards can slow down product development and market entry, limiting the growth potential of low-trauma adhesive products.
