## Abstracts

Low tunnel plastic film is a type of plastic film that is used to create low tunnels in gardening and agriculture. These tunnels are typically made by bending hoops or stakes over a row of plants and covering them with the plastic film to create a protective barrier. The film helps to trap heat and moisture, creating a warmer and more humid environment for the plants to grow in. It can also protect plants from pests, wind, and harsh weather conditions.

According to our (Global Info Research) latest study, the global Low Tunnel Plastic Film market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
