The global Low-volatile Silicone Antifoam market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Low-volatility silicone defoamer refers to a type of defoamer containing low-volatility silicone compounds. Antifoam agents are chemical additives designed to control or prevent the formation of foam in industrial processes or products. It can inhibit foam formation or help break down existing foam. Prevent foam from causing problems in processes in the chemical, food and beverage, pharmaceutical and wastewater treatment industries. Low volatility refers to the tendency of a substance to evaporate or vaporize at a slower rate, making it suitable for applications where volatile emissions are a concern.
