The global Low Voltage AC Servo Motor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Low Voltage AC Servo Motor is a type of electric motor that is designed to provide precise control over position, velocity, and acceleration of a mechanical system. It operates on AC power at a low voltage and is commonly used in robotics, automation, and other motion control applications. Low voltage AC servo motors are typically three-phase synchronous motors with a permanent magnet rotor and stator windings. They are often designed with high pole counts to provide high torque density and low cogging, which helps to minimize position error and improve overall performance.
