According to our (Global Info Research) latest study, the global Low Voltage Busbar market size was valued at USD 517.6 million in 2022 and is forecast to a readjusted size of USD 928.6 million by 2029 with a CAGR of 8.7% during review period.

Low voltage busbars are used primary in switchgear equipment for residential or industrial use. The switchgear equipment may contain single busbar or double busbars, and the types of switchgear may be solid-, air-, or gas-insulated. In all cases, the rated voltage of low voltage switchgear does not exceed 690 Vac. Though this is high voltage compared to the outlets in your house, these are still quite low voltages compared to the 12kV to 38kV used in medium voltage busbar applications. In these case, the thickness of the epoxy coating used is much, much less than for medium voltage busbars. The purpose of the epoxy coating powder is the same however: to insulate the busbars from each other and to prevent dangerous arcing faults.
