Abstracts

The global Low Voltage Busbar market size is expected to reach \$ 928.6 million by 2029, rising at a market growth of 8.7% CAGR during the forecast period (2023-2029).

Low voltage busbars are used primary in switchgear equipment for residential or industrial use. The switchgear equipment may contain single busbar or double busbars, and the types of switchgear may be solid-, air-, or gas-insulated. In all cases, the rated voltage of low voltage switchgear does not exceed 690 Vac. Though this is high voltage compared to the outlets in your house, these are still quite low voltages compared to the 12kV to 38kV used in medium voltage busbar applications. In these case, the thickness of the epoxy coating used is much, much less than for medium voltage busbars. The purpose of the epoxy coating powder is the same however: to insulate the busbars from each other and to prevent dangerous arcing faults.

This report studies the global Low Voltage Busbar production, demand, key manufacturers, and key regions.
