## Abstracts

The global Low-voltage Electrician Gloves market size is expected to reach \$ 368 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

In 2025, global production of low-voltage electrical insulating gloves reached 8.42 million pairs, with an average selling price of US\$28.13 per pair.

Low-voltage electrical insulating gloves are hand protection equipment designed for scenarios such as low-voltage live-line work, electrical installation and maintenance, industrial equipment maintenance, utility operation and maintenance, new energy vehicle maintenance, photovoltaic energy storage system maintenance, and operation of low-voltage distribution cabinets and instrument panels. Their core function is to form a standard-compliant insulating barrier between the hands and live conductors, terminals, busbars, switches, wires, and electrical components, thereby reducing the risk of electric shock, electric arc injury, and other injuries. These products are typically made from natural rubber latex, synthetic rubber, EPDM, or composite insulating materials, and are manufactured through processes such as impregnation, molding, vulcanization, chlorination, withstand voltage testing, visual inspection, batch traceability, and individual packaging.

From a demand structure perspective, traditional power utilities and industrial maintenance remain the fundamental demand for low-voltage electrical insulating gloves. New growth primarily comes from new energy vehicle repair, power battery maintenance, charging pile installation, photovoltaic energy storage system maintenance, data center power distribution, rail transit, and industrial and commercial electrical maintenance. Compared to high-voltage gloves, low-voltage gloves are lighter,

thinner, more flexible, and have a higher replacement frequency, making them more suitable for frequent handling of small terminals, connectors, switches, instruments, and low-voltage control cabinets. With the increasing number of electrified equipment and strengthened occupational safety responsibilities, corporate procurement logic is shifting from low-priced labor protection consumables to standard compliance, batch traceability, testing cycle management, and glove kit procurement. The average gross profit margin for low-voltage electrical insulating gloves is 20.37%, with a single production line capacity of 300,000-400,000 pairs/year.
