The global Low-Voltage Reactive Power Compensation Assembly market size is expected to reach \$ 7013 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Low-voltage reactive power compensation assemblies are complete sets of electrical equipment used in low-voltage distribution networks of 0.4kV and below. By connecting parallel capacitor banks, they locally compensate for the reactive power required by inductive loads, significantly improve the power factor, reduce transmission line losses and transformer energy consumption, and improve the quality of power supply voltage.

In 2025, the global production of low-voltage reactive power compensation assemblies was 2.15 million units, with an average price of US\$2,200 per unit.
