LowDK electronic cloth refers to a type of fabric that incorporates conductive materials, designed for use in electronic applications. The 'LowDK' designation refers to the material's low dielectric constant (DK), which makes it suitable for high-frequency or microwave applications where minimal signal loss or interference is critical. Typically made by embedding conductive fibers or coatings into the fabric, LowDK electronic cloth is used in flexible electronics, antennas, wearable technology, and shielding applications. Its low dielectric constant helps ensure efficient transmission of electromagnetic signals, making it ideal for use in industries such as telecommunications, aerospace, and medical devices where lightweight, flexible, and high-performance materials are essential.
