According to our (Global Info Research) latest study, the global Lower limb 3D printed orthosis market size was valued at US\$ 248 million in 2025 and is forecast to a readjusted size of US\$ 451 million by 2032 with a CAGR of 9.0% during review period.

3D printed orthoses refer to custom external support devices made using 3D printing technology. They help stabilize, guide, relieve, or correct musculoskeletal conditions and are designed based on individual patient anatomy, often using 3D scanning and modeling technologies. The primary advantage of 3D printing in orthotics is the ability to produce custom-made devices tailored precisely to the patient's anatomy, improving comfort, fit, and functionality.

Ankle-Foot Orthoses (AFOs), Knee-Ankle-Foot Orthoses (KAFOs), and Foot Orthoses (FOs) are all types of orthotic devices designed to support, align, prevent, or correct deformities, as well as to improve the function of the musculoskeletal system. Each device targets specific areas of the lower limbs depending on the user's needs.

KAFOs are more extensive orthotic devices that provide support from the foot up to the knee and sometimes even the hip.

FOs are shoe inserts designed to support or correct the alignment of the foot and address foot-related conditions.
