## Abstracts

According to our (Global Info Research) latest study, the global Lower Limb Joint Implants market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Total joint replacement (also known as total joint arthroplasty) is regarded as among the most valued developments in the history of orthopedics. The procedure relieves pain and restores function to patients whose joints have been destroyed by trauma or disease. Although natural, human articular cartilage is the best bearing surface for joints, when there is too much damage to these tissues, man-made joint replacements are required. However, the higher level of friction in man-made implants compared to a person's natural bearings means that wear becomes an ongoing concern for joint replacement patients. Hip and knee replacements are the most commonly performed joint replacements, but replacement surgery can be performed on other joints, as well, including the ankle, wrist, shoulder, and elbow.

Devices that are placed inside or on the surface of the body in order to replace a missing or damaged body part are called implant devices. Some implant devices may also be used to carry medicines into the body or monitor bodily functions. Some implants may be left permanently in the body while others may be taken out after a specified period of time. An artificial hip or knee is typically left permanently in the body unless a major problem requires "revision," the removal and replacement of an artificial joint. This report focus on Lower Limb Joint Implants market.
