According to our (Global Info Research) latest study, the global LPG Dual Fuel Vehicles market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Liquefied Petroleum Gas (LPG) is a dual-fuel vehicle that adds an LPG fuel supply unit without changing the engine system and petrol supply system of the original vehicle, so that the vehicle has two independent fuel supply systems, LPG and petrol, and can use LPG and petrol as fuel, and achieve free switching.

Data from the Organisation Mondiale d'Automobile (OICA) shows that global car production and sales peaked in 2017 at 97.3 million and 95.89 million units in the last 10 years. The global economic expansion ended in 2018, and an overall decline in the global car market followed. By 2022, global automobiles stood at 81.6 million units. Currently, more than 90% of global automobiles are concentrated in three continents, Asia, Europe and North America, with Asia accounting for 56% of global automobile production, Europe for 20% and North America for 16%. The global automobile main production countries contain China, the United States, Japan, South Korea, Germany, India and Mexico and other countries; of which China is the world's largest automobile largest automobile production countries, accounting for about 32%.
