Abstracts

LPWAN is a new wireless network technology designed for low-power IoT applications. It consists of a star topology, which means that all devices are connected to a central access point or base station, similar to a cell tower in cellular technology. There are a range of LPWAN technologies operating on licensed and unlicensed bands, but typically at the lower end of the scale, such as NB (narrowband)-IoT. The low-power wide area network antenna is a key component in the LPWAN communication system. Through optimized design, it meets the requirements of low power consumption, long-distance transmission and specific application environments, ensuring that IoT devices can connect to the LPWAN network reliably and efficiently. This report studies LPWAN Gateway Antenna.

According to our (Global Info Research) latest study, the global LPWAN Gateway Antenna market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
