Abstracts

According to our (Global Info Research) latest study, the global LSZH (Low Smoke Zero Halogen) Cables market size was valued at USD 1735.8 million in 2023 and is forecast to a readjusted size of USD 2116.2 million by 2030 with a CAGR of 2.9% during review period.

LSZH (Low Smoke Zero Halogen) Cables are electrical cables that are designed with insulation and jacketing materials that emit minimal smoke and no halogen gases when exposed to high heat or flames. These cables are specifically engineered to improve safety in environments where the release of toxic and corrosive gases could pose a risk to human life, sensitive electronic equipment, or critical infrastructure.

LSZH cables are commonly used in applications where fire safety is a top priority, such as commercial buildings, transportation systems, data centers, and areas with high population density. They are often specified in environments where the potential for fire or the spread of smoke could cause significant harm or hinder evacuation efforts. Unlike traditional PVC cables, which release dense smoke and toxic gases when burned, LSZH cables are made with special compounds that limit the emission of smoke and corrosive gases such as chlorine and bromine. Instead, LSZH cables produce low smoke and minimal levels of toxic gases when exposed to fire.

The Global Info Research report includes an overview of the development of the LSZH (Low Smoke Zero Halogen) Cables industry chain, the market status of Building (Diameter Wires

Contents

1 MARKET OVERVIEW

1.1 Product Overview and Scope of LSZH (Low Smoke Zero Halogen) Cables

1.2 Market Estimation Caveats and Base Year

1.3 Market Analysis by Type

1.3.1 Overview: Global LSZH (Low Smoke Zero Halogen) Cables Consumption Value by Type: 2019 Versus 2023 Versus 2030

1.3.2 Diameter Wires
