According to our (Global Info Research) latest study, the global LTL Logistic market size was valued at US\$ 692260 million in 2024 and is forecast to a readjusted size of USD 873600 million by 2031 with a CAGR of 3.4% during review period.

Less-than-load logistics refers to the transportation demand of goods whose volume or weight is not enough to fill a whole vehicle (full container or full cabinet). The logistics company integrates small batches of goods from different customers and assembles them on the same transportation tool for distribution. In this way, less-than-load logistics can help customers save transportation costs and improve vehicle utilization. Less-than-load logistics is widely used in the commercial and e-commerce fields, and is suitable for small and medium-sized enterprises or individuals and companies that need to transport smaller batches of goods.

As an efficient solution in logistics and transportation, LTL logistics is of great significance in the modern supply chain. It reduces the transportation cost of individual customers by integrating small batches of goods, and is particularly suitable for the freight needs of small and medium-sized enterprises and e-commerce platforms. At the same time, LTL logistics improves the utilization rate of logistics resources, reduces the empty rate of transportation vehicles, and has a positive impact on both environmental and economic benefits. However, the complexity of LTL logistics also increases the difficulty of cargo management and tracking. In the future, with the support of technical means, how to further optimize timeliness and accuracy will become the core competitiveness of the industry.
