Abstracts

According to our (Global Info Research) latest study, the global LTPS TFT LCD market size was valued at US$ 33330 million in 2025 and is forecast to a readjusted size of US$ 38110 million by 2032 with a CAGR of 2.0% during review period.

LTPS, low temperature polysilicon, is a branch of polysilicon technology. For LCD displays, the use of polycrystalline silicon liquid crystal materials has many advantages. In the early stage of the development of polycrystalline silicon technology, in order to convert the glass substrate from an amorphous silicon structure (a-Si) to a polycrystalline silicon structure, it is necessary to use a laser annealing (Laser Anneal) In the high temperature oxidation process, the temperature of the glass substrate will exceed 1000 degrees Celsius. Compared with traditional high-temperature polysilicon, although low-temperature polysilicon also requires a laser irradiation process, it uses an excimer laser as a heat source, and the entire processing process is completed below 500-600 degrees Celsius, which can also be tolerated by ordinary glass substrates. The global LTPS LCD market is mainly distributed in Japan, South Korea and China. The core companies include Tianma, BOE, Japan Display, CSOT, Sharp, LG Display, AUO and Samsung Display, among which the share of TOP3 companies reaches 48%.
