Abstracts

The global Lubricated Nylon Thread market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Lubricated nylon thread is a type of sewing thread made from nylon fibers that have been coated or impregnated with a lubricating substance. This lubrication helps reduce friction, improve the thread's sewability, and enhance its performance during sewing operations. The lubricated coating provides smoother thread passage through fabric and sewing machine components, reducing tangling, knotting, and breakage. Lubricated nylon thread is known for its strength, durability, and ability to withstand high-speed sewing operations. It is commonly used in industrial sewing, upholstery, and other applications that require reliable and efficient stitching.

This report studies the global Lubricated Nylon Thread production, demand, key manufacturers, and key regions.
