Lubricating oil filter cellulose filter element is a filter element for filtering lubricating oil, which uses cellulose material as the filter medium to capture solid particles, impurities and pollutants through its pores and fine fibers to ensure the cleanliness and quality of the lubricating oil, thus protecting the normal operation of equipment and mechanical systems.

Lubricating oil filter cellulose filter element has the following features and functions:

Filtration efficiency: The cellulose filter element can efficiently filter tiny particles, impurities and pollutants in lubricating oil, providing excellent filtration effect.

High dust holding capacity: The cellulose filter element has a large dust holding capacity, which can be used for a long time and maintain high filtration efficiency, reducing replacement frequency and maintenance costs.

Low Pressure Drop: The design and material selection of the cellulose filter element results in a low pressure drop, reducing the impact on the flow and efficiency of the lubrication system.

Corrosion resistance: Cellulose filter elements can withstand certain chemical corrosion and are suitable for different types of lubricating oils and process fluids.

Easy to replace: The cellulose filter element usually adopts a detachable structure, which is easy to replace and maintain, saving time and cost.

Lubricating oil filter cellulose filter elements are an important part of protecting equipment and mechanical systems from solid particles, impurities and pollutants, and are widely used in various industrial fields and equipment.
