Lubricating Oil Recycling refers to the collection, treatment, and re-refining of used lubricating oils to recover base oil or fuel-grade products for reuse. It helps reduce waste disposal, lower environmental impact, and improve resource efficiency. The process is widely applied in industrial maintenance, automotive service, marine operations, and waste oil management systems.

The industrial chain of Lubricating Oil Recycling includes upstream waste oil collection, storage tanks, filtration media, chemicals, additives, and transport systems. Midstream covers pretreatment, dehydration, distillation, re-refining, blending, and quality inspection. Downstream applications mainly include regenerated base oils, industrial lubricants, fuel products, marine use, and circular resource utilization systems.

The global lubricating oil recycling market is driven by stringent environmental regulations, the need for sustainable waste management, and cost advantages over virgin base oil production. Advanced re-refining technologies enable high-quality recycled oil that meets industrial and automotive standards. Growing focus on circular economy and carbon reduction further supports market expansion. Key players provide integrated collection, treatment, and distribution solutions to ensure consistent supply and compliance.
