Lubricating Oils and Greases refer to an oily substance that is used to cover or treat machinery so as to lessen friction

SCOPE OF THE REPORT:

This report focuses on the Lubricating Oils and Greases in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. With the expansion of the passenger vehicles segment, there has been a rise in demand for high-quality automotive lubricants with better fuel efficiency and lower emissions. Government schemes in emerging economies, such as the 'Make in India' program initiated by the Indian government, have attracted high foreign investments across the automotive industry. This has further boosted demand for lubricants. Stable base oil production across regions has stimulated feedstock security among blenders in the recent past. Stable supply would thereby address profitability concerns of manufacturers, thereby positively influencing industry competition. Moreover, recovering end-use industries are likely to drive sales of lubricating oil, which is slated to provide equilibrium to the supply-demand scenario.

In addition, high growth in the base oil market, rapid industrialization, burgeoning population and urbanization, and high growth in major end-use industries such as textiles, chemicals, food processing, and metalworking are some other factors driving industry growth.

The worldwide market for Lubricating Oils and Greases is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx

million US\$ in 2017, according to a new GIR (Global Info Research) study.
