## Abstracts

The global Lugol's Iodine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Lugol's iodine, also known as Lugol's solution, first made in 1829, is a solution of iodine named after the French physician J.G.A. Lugol. Lugol's iodine solution is often used as an antiseptic and disinfectant, a starch indicator, to replenish iodine deficiency, to protect the thyroid gland from radioactive materials (e.g. 'fallout'), and for emergency disinfection of drinking water. Lugol's was often used in the treatment of gout and was used as a first line treatment for hypothyroidism in adults. It consists of 5% iodine (I<sub>2</sub>) and 10% potassium iodide (KI) in 85% distilled water with a total iodine content of 130 mg/mL. Potassium iodide makes the iodine water soluble through the formation of the I<sub>3</sub><sup>-</sup> ion. It is obtained from chemists and pharmacists who are licensed to prepare and dispense the solution. It can be used as a cell stain, making the cell nuclei more visible and for preserving phytoplankton samples. During colposcopy, Lugol's iodine is applied to the vagina and cervix. Normal tissue stains brown, while tissue suspicious for cancer does not stain, and appears pale compared to the surrounding tissue. Biopsy of suspicious tissue can then be performed. This is called Schiller's test.

This report studies the global Lugol's Iodine production, demand, key manufacturers, and key regions.
