The global Lumbosacral Orthosis Brace market size is expected to reach \$ 505.6 million by 2029, rising at a market growth of 4.9% CAGR during the forecast period (2023-2029).

A Lumbosacral Orthosis (LSO) brace is a type of spinal brace that is used to provide support and stabilization to the lower back (lumbar) and sacral regions of the spine. It is commonly used to treat conditions such as lower back pain, herniated discs, spinal stenosis, and scoliosis. The LSO brace is designed to restrict motion in the lumbar and sacral regions of the spine while providing support to the lower back. LSO braces come in different types, including soft and rigid braces. Soft braces are made of flexible materials such as neoprene or elastic, and they provide gentle support to the lower back. Rigid braces, on the other hand, are made of hard plastic and metal, and they provide more rigid support to the spine. Rigid LSO braces are commonly used for patients who require more stability and support due to severe spinal conditions.
