Abstracts

According to our (Global Info Research) latest study, the global LV Modular Distribution Board market size was valued at US\$ 7472 million in 2025 and is forecast to a readjusted size of US\$ 10800 million by 2032 with a CAGR of 5.5% during review period.

LV modular distribution board is a component of an LV electricity supply system that divides an electrical power feed into subsidiary circuits while providing a protective fuse or circuit breaker for each circuit in a common enclosure.

Rising demand for low-voltage control systems with advanced features supported by power supply reforms, growing population, and expanding multi-storey apartments and residential complexes will spur product adoption. The switchboard industry is expected to gain considerable momentum owing to increasing focus on energy efficiency directives and regulations to minimize power loss and reduce energy consumption, which will accelerate the industry size. Rising penetration of renewable energy sources including wind and solar energy coupled with rising demand for smart distribution panel systems including smart grid systems and smart homes will stimulate favorable business scenarios. The switchboard market is set to witness growth owing to rising electrification rates and ongoing renovation of existing power infrastructure. Expansion of residential and commercial electricity networks driven by mass suburban migration will aid market growth. Moreover, with the rapid digitization of industrial peripherals, the development of stand-alone microgrid projects will have a positive impact on industry dynamics.
