According to our (Global Info Research) latest study, the global Lyophilized Reagent Beads market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The fact that lyophilized products can be transported and stored at room temperature is the main reason why it attracts the attention of the molecular diagnostic industry. Since the biological reagents used in molecular diagnostic experiments contain biologically active ingredients (various enzymes and nucleic acid samples, etc.), in order to ensure that the reagents are transported during transportation There will be no performance degradation. Traditional nucleic acid detection kits have strict requirements for the transportation of reagents. They usually use dry ice or chemical ice to maintain the transportation temperature at around -20°C.
